

PowerDRIVE-System

Easy integration, rapid format changes, fewer sources of error

Our plug and play solution for the global use of your machine

- PowerDRIVE
 Fully automatic positioning drives reduce set-up times and costs on every change of format
- PowerDRIVE-Box
 Decentral control unit for five drives enables maximum variety of interfaces
- PowerDRIVE-Connect Ready-to-use hybrid cables minimise the cabling effort
- PowerDRIVE-Lib Integrate positioning drives and control unit efficiently into the machine's control system with active condition monitoring for your Industry 4.0 activities
- PowerDRIVE-Support-Tool
 Preconfigure and test the positioning system easily with the recommended software
- Recipe software including support
 Stored formats enable machines to be modernised and set up quickly and without errors

PowerDRIVE-Positioning

Positioning drives for feed axes

Aluminium or stainless steel

PowerDRIVE-Connect

Easy cabling

- Studio 5000 / RSLogix
- Automation Studio
- TwinCAT

We would be happy to provide support

The experience we have gained through 50 years of motion control enables us to answer any questions you may have about our PowerDRIVE-System. Our specialists will also be happy to assist you personally on site if necessary. Talk to us.

PowerDRIVE-Box

Decentral control for 5 PowerDRIVEs

PowerDRIVE-Lib

Integration without programming

Comprehensive function block library for:

- TIA-Portal / Step 7 / SCOUT
- CODESYS 3.x / SoMachine V4

PowerDRIVE-Support-Tool

Our recommendation: Configure and set up the complete PowerDRIVE-System on the PC

What do you need to have?

- PC with free USB port, current version of .Net framework The application can be used without extensive installation
- Connection to USB interface of the PowerDRIVE-Box
- Graphic user interface with tool tips for ease of operation

Data exchange with the PC

- Component parameters are imported and exported independently of the interface to the PLC
- Parameters are stored in the drives
- Parameter sets are stored on the PC, e.g. for identical machines

In this way machines with identical operating parameters can be configured quickly and reliably.

Commissioning and setting up

- Functions of the PowerDRIVEs are tested independently of the PLC connection and complex program routines
- Manual movement of PowerDRIVEs
- Interface preparation for PLC connection (Note-ID / address of the DHCP server, etc.)

Drive 1	a Drives 1-5 Para	meter Leve

	0x00000000		Acceleration	2525	132	20301	LJLJ	Un	
Warning 😐 Error 😑	0x00000000 Fault reset		Acceleration Deceleration	2525 2525	132	26581	2525	OK	

Data exchange with the PLC

- Parameter setting for the PowerDRIVE-System directly in the PLC programming environment
- Simple parameter control: motor current, speed, warnings, etc.
- Active condition monitoring supports your Industry 4.0 activities

All steps for setting up the axis can be executed directly in your machine's PLC or conveniently on the PC.
